

- **Date and Time:**

27 August 2014 | 3:45 pm

- **Attendees:**

Rohith Reddy

Mrinal Dhar

Karthik Reddy

Bhaves Goyal

Mr. Naresh (Akshar Speech Technologies)

- **Agenda:**

To know about further requirements and asking them about the resources.

- **Minutes:**

Discussion:

The app's description was changed. Initially according to the project details it was a grocery app, but in this meeting it was changed to “Clothing and Accessories”. The client's voice recognition engine is not ready and hence we cannot use it in the project yet. We will have to develop it based on text input from the user.

Action Points:

- Implementing a Search Bar first and after the voice to text engine is setup we add it to the search bar.
- Fetching data (according to the search) from one of the online store which provides a free API.
- The app should be compatible with versions of android 3.3 and above.
- User registration for the app is mandatory.
- We were asked to implement a basic UI for the android version, before the next meeting.

- **Date of the next meeting:**

3 September 2014 | 11:45 pm
