

## **Date and Time:**

17 September 2014 | 11:45 pm

## **Attendees:**

Rohith Reddy

Mrinal Dhar

Karthik Reddy

Bhavesh Goyal

Mr. Naresh (Akshar Speech Technologies)

## **Agenda:**

To know about the parse format and procedure to parse data from xml into application.

## **Minutes:**

### **Discussion:**

We discussed about how shall we implement search through search bar from the xml file and load data into the app.

### **Action Points:**

- Basically when the user enters text we should search it in the xml file.
- If it is found we have to display the relevant information about it.
- If it is not found we have to display the most appropriately matched items from the xml file.
- The text we entered should also search for different options for items like add to kart,price.
- At present the voice search was said to be implemented with the google API.

## **Date of the next meeting:**

24 September 2014 | 11:45 pm
